

Systems Integration Project

How Dimensional Community helped integrate SimCorp One for a Global Asset Manager

Implementation Challenge

The client faced a significant technological consolidation challenge. Their existing technological ecosystem was fragmented across numerous legacy accounting systems. These operated independently in different regions worldwide. This multi-year effort aimed to deliver a single integrated global investment accounting platform on SimCorp, used across the client's products to provide greater analytical and reporting flexibility.

The complex landscape of disparate regional systems created substantial inefficiencies, with manual data entry dominating critical processes. The lack of standardization across systems made effective data management nearly impossible, while integration between these numerous platforms had become increasingly problematic, requiring extensive workarounds and creating significant operational risks.

AT A GLANCE

CLIENT

Global Asset Manager

AUM

\$1.5tn

CHALLENGES

- Regional legacy systems
- Manual data entry
- Complex integration requirements
- Lack of standardization

BENEFITS

- 75% less manual entry
- 150+ systems integrated
- Centralized data storage
- Enhanced analytics
- Standardized communication to align with processes

Transformative Solution Approach

Dimensional Community orchestrated a comprehensive integration strategy centered on SimCorp One. Our integration consultants worked in partnership with the client and SimCorp, reviewing the systems architecture, identifying areas for improvement, and designing and building integration solutions. The implementation strategy emphasized several critical objectives:

Establishing a single global setup
across regions

Creating standardized
communication between systems

Optimizing SimCorp's integration
tools

Building enterprise-level data
management capabilities

Achieving these objectives required meticulous collaboration with the client's subject matter experts, leveraging strategic planning and rigorous quality assurance methodologies.

Comprehensive Implementation

The transformation encompassed a sophisticated review and optimization of SimCorp's integration tools, including the Data Extractor, the Filter Toolbox and the Communication Server.

Each component was carefully configured to address the client's specific operational requirements, ensuring a holistic and integrated solution. Configuration and design documentation was thoroughly reviewed to ensure SimCorp provided the functionality to meet the customer's needs, with additional configuration solutions implemented to optimize the platform.

Regular validation sessions with end users ensured that the solution met real-world operational needs, not just technical specifications. This collaborative approach helped identify potential issues early and incorporate valuable feedback directly into the implementation process.

Transformational Outcomes

The project delivered exceptional results that exceeded standard systems integration outcomes. The client combined many old systems into one platform, cutting manual data entry by 75% and connecting over 150 systems with SimCorp.

The most important achievement was building a strong tech foundation with a service bus that helped systems talk to each other and stored data in one place. This made it easier to use data and helped staff work better and make smarter decisions.

The new setup greatly improved daily work for teams across the organization. Staff spent much less time on manual data entry and fixing errors, which let them focus on more important tasks. Reports that used to take days to create could now be done in hours or minutes, giving managers faster access to key information.

Dimensional Community also trained the client's staff and gave hands-on SimCorp support, making them less dependent on outside help. This knowledge transfer was vital for the long-term success of the project, as it enabled the client's team to handle most issues on their own.

About Dimensional Community

Dimensional Community is a leading, global SimCorp consultancy, dedicated to helping organizations get the most out of their SimCorp platform.

We measure success by the value we create, not hours logged. Every consultant is accountable for business results that align with your goals.

Proven Track Record: With over 2 decades of experience, we've built a large community of SimCorp professionals and supported more than 30 organizations worldwide.

Quality: We don't just send consultants; we send specialists with deep SimCorp expertise and real-world experience, both from vendor and client sides.

Up-skill: We leave your team stronger than we found it through training and mentoring, helping your internal teams become independent and successful.

Faster Results: Our tested tools and templates cut implementation time and improve quality, helping you reach value faster and more cost-effectively.

We understand the importance of being
unified and driven to succeed collectively
