

# SimCorp Front Office Roll-Out

How Dimensional Community transformed Front Office at a large European Asset Manager

## Lack of Innovation

Our client had been using a best-of-breed approach in front office resulting in several discrete front office systems, including Charles River and Murex.

This had over the years made integration complex and expensive and a more modern foundation was badly needed.

The challenge was especially felt on a corporate level which lacked an overview of their company-wide exposure and risk.

## Transformed SimCorp Front Office

Dimensional Community worked closely with the front office users and IT to implement SimCorp's front office suite consisting of the Asset Manager, the Order Manager, and the Compliance Manager as well as performance and risk management.

We worked closely with their Subject Matter Experts to transform legacy processes and adapt them to SimCorp workflows, reviewed designs, and configured solutions in SimCorp.

Dimensional Community validated solutions put forward by SimCorp and provided feedback and recommendations on areas to improve.

We also worked closely with SimCorp to close gaps and get solutions working the first time around when delivered.

### Confidence with accurate data and numbers

Our team were instrumental in driving change through workflows and accurate data, giving portfolio managers, traders and compliance officers confidence in the numbers from SimCorp.

We replaced 4 front office systems with SimCorp and over a 6 month period rolled it out to 8 locations throughout Europe.

As a result, the client has reduced IT spending by 45% and kept staff constant while growing AUM 50% over 2 years.
